DETAILED ACTION

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the second Imod current source must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-17 are rejected under 35 U.S.C. 102(b) as being anticipated by Yoshimoto et al (4,689,795). Yoshimoto et al discloses the claimed invention. In figure 2, Yoshimoto et al illustrates a laser driver generating an I_{mod} current (inherent,

because Yoshimoto teaches a second means (8,9,10,11,12) for controlling the pulse modulation of the laser) and an Ibias current (inherent, because Yoshimoto teaches a first circuit (4,5,6,11,12) for "controlling the semiconductor laser driving current on the basis of a bottom output [which, in applicant's terminology, is "0/off" or P0] of semiconductor laser"), the laser driver characterized in that a portion of the Ibias current (via first circuit 4,5,6,11,12) is fed forward (see abstract line 9) to the Imod current (via second means 8,9,10,11,12).

Conclusion
